RESEARCH INTERESTS	My research focuses on stability and change in personality and subjective well-being. I investigate the associations between personality traits and well-being, and I use the results of these studies to develop theories about the functions of emotions and the mechanisms underlying personality traits. I also investigate more general questions regarding the causes and consequences of subjective well-being, including the link between major life events and changes in well-being. I pay careful attention to measurement issues, focusing on the quality of the measures that we use to assess personality and well-being. Finally, I am interested in methods for examining change in personality and well-being. I also am interested in issues about replicability and have been involved in efforts to promote replication and improve research practices in psychology and other sciences.
